Address- Gat No. 186, Gawalwadi Road, At - Ashewadi (Ramshej) Tal - Dindori, Dist - Nashik.

Date & Time -

Guidance -

Topic & Subject - To study power electronic control drive.

Information/Study -

Banganga Paper Mills, established on 17<sup>th</sup> October 2013 as a partnership firm by Mr. Chetan Dhattrak, Mrs. Jayashree Dhattrak and Mr. Karbhari Dhattrak. The firm has set up a unit with a unit spread over an area more than 9500 sq.m approx. at Ramshej near

Nashik, Maharashtra.

Objective of Company.

The main objective of the company is to carry on the business of manufacture of Kraft paper exclusively used for packing industry. The company has highly experienced and skilled team who assures reuse of 90-95% water and chemical's used during process. These minimize the fresh water consumption which is added due to evaporation. The chemical's used are eco friendly. The water drained at various stages of manufacturing is lifted into backwater tank where on it is fed to dump chest for recycling.

Information/Study of Power Control drives.

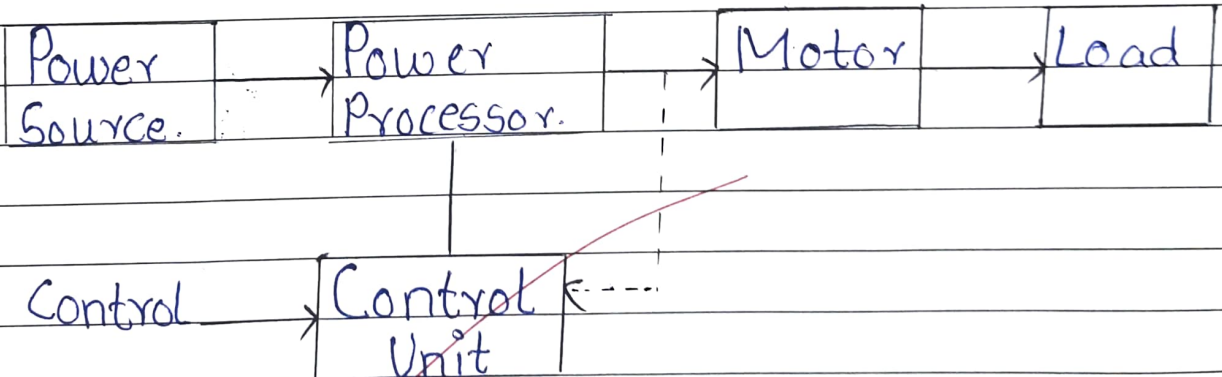

In this industry for processing of making paper they used different electrical, mechanical machines like Grinders, Motors, Rollers and they used different types of electrical control drives to operate these machines.

## Types of Electrical Drives in Industry-

1. 30 kW VFD.
2. 37 kW VFD.
3. 40 kW VFD.
4. 250 kW VFD Pulper.
5. 37 kW VFD Rewinder.

## Components of Electrical Drives.

1. Power Source.
2. Power Processor.
3. Motor.
4. Load.
5. Control Unit.

## Conclusion.

In this visit of Banganga Paper Mills we have studied that they used different drives for operation of machine's they used.

### **Objective of visit:-**

Our main purpose for this visit is to be familiar with R.C.C foundation construction site and practical knowledge of site.

### **General information about the site:-**

R.C.C footing construction site ( apartments ). construction of foundation. Where the grade of foundation is 35 mpa. There the two type of footing where used (Square and Rectangular)

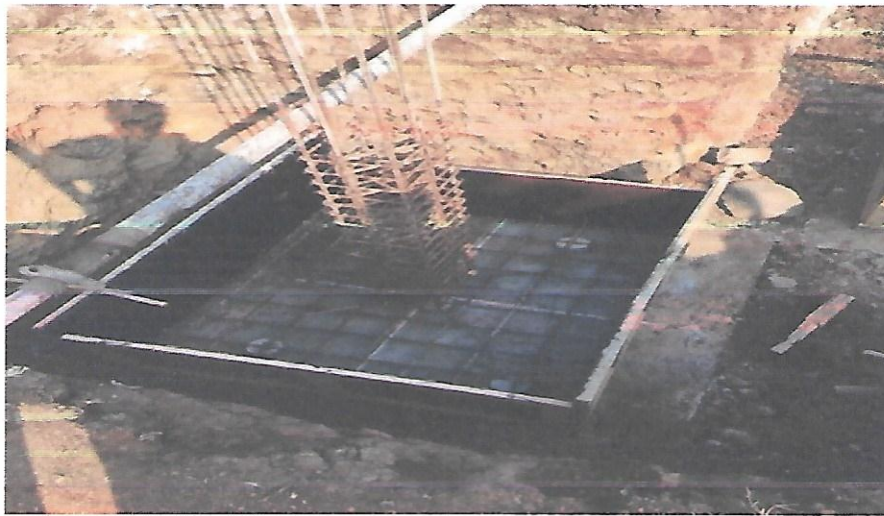

### **SQUARE FOOTING:-**

The above figure shows the square footing. the dimension of footing is same  $L=B$ . The concrete bed is provided at the base of footing. The reinforcement mate is provided with  $10\text{mm}\phi$  bars. The cover of footing is  $50\text{mm}$  . depends upon the soil bearing capacity the size and depth of footing is varies.

## REINFORCEMENT ARRANGEMENT:-

The above figure shows the reinforcement arrangement at the site. The 10 mm $\phi$  bars are used in the in footing. The spacing of the bars are 50mm center 150mm center to center. The cover is provided is 50mm.

## CONCLUSION:-

From this visit we, get the loots of information and knowledge about the R.R.C Foundation construction work. This visit is very important for us. the practical knowledge of construction site is very important for a civil engineer. We have seen over there the construction foundation, type of foundation and shape foundation, Square and rectangular, type of steel etc.

ASSIGNMENT NO.	1
TITLE:	Implement Goal stack planning for the following configurations from the blocked world.
ROLL NO.	10
CLASS	Be Comp
DATE	
SUBJECT	AIR

## Assignment No : 1

Aim : Implement goal stack planning for the following configurations from the blocked world.

B				C	B
A		D		A	D

(Start) → (Goal)

Objective :

- i) The basic concepts of Goal stack planning.
- ii) General algorithm for Goal stack planning.
- iii) Logic of goal stack planning implementation.

Theory :

Introduction :

The planning in artificial Intelligence is about the decision making tasks performed by the robots or computer programs to achieve a specific goal. The execution of planning is about choosing a sequence of actions with a high likelihood to complete the specific task.

## Components of planning System :

The planning consists of following important steps :

- Choose the best rule for applying the next rule based on the best available heuristics.
- Apply the choosen rule for computing the new problem state.
- Detect when a solution has been found.
- Detect dead ends so that they can be abandoned & the system's effort is directed in more fruitful directions.
- Detect when an almost correct solution has been found.

## Blocks - world planning Problem :

The blocks - world problem is known as Sussman Anomaly.

Non interleaved planners of the early 1970's were unable to solve this problem, hence it is considered as anomalous.

When two subgoals  $G_1$  &  $G_2$  are given, a non-interleaved planner produces either a plan for  $G_1$  concatenated with a plan for  $G_2$ , vice-versa.

In block - world problem, three blocks labeled as 'A', 'B', 'C' are allowed to rest on the flat surface. The given condition is that only one block can be moved at a time to achieve the goal.

Goal Stack planning :

This is one of the most important planning algorithms, which is specifically used by STRIPS.

The stack is used in an algorithm to hold the actions & satisfy the goal. A knowledge base is used to hold the current state, actions.

Goal Stack is similar to a node in a search tree, where the branches are created if there is a choice of an action.

The important steps of the algorithm are as stated below :

- i) Start by pushing the original goal on the stack. Repeat this until the stack becomes empty. If stack top is a compound goal, then push its unsatisfied sub goals on the stack.
- ii) If stack top is a single unsatisfied goal then, replace it by an action & push the action's

precondition on the stack to satisfy the condition.

iii) If stack top is an action, pop it from the stack, execute it & change the knowledge base by the effects of the action.

iv) If stack top is a satisfied goal, pop it from the stack.

Basic idea to handle interactive compound goals uses goal stack, Here the stack contains.

- Goals
- Operators ... ADD, DELETE & PREREQUISITE lists.
- A database maintaining the current situation for each operator used.

Working of Goal Stack planning method :-

a) In this method, the problem solver uses a single stack

(stack contains

i) Goals (subgoals) &

ii) operators that are required to satisfy those goals.

b) Problem Solver also depends on the database that describes

- i) The Current situation &
- ii) Set of operators described by PRECONDITION, ADD & DELETE lists

c) At each step of problem solving process, we will try to solve top goal on the stack.  
It is solved by finding sequence of operators that will satisfy the goal.

d) In next step, store all the preconditions that are required to satisfy the goal followed by goal.

e) If goal is true in current state then pop the goal from the stack.

f) Then concentrate on the goal i.e. now on the top of the stack.

g) This process continues until the goal stack is empty.

h) Finally, original goal is compared to the state derived from the above procedure.

If any components of the goal is compared to the state, goal are not satisfied in that state because

of some undone which req. to satisfy the next goal, then reinsert unsolved parts of the goal onto the stack & the process is resumed.

- Goal state is divided into four (Subgoals):

1. ON (C, A)
2. ON (B, D)
3. ONTABLE (A)
4. ONTABLE (D)

- Out of these four goals, 2 are already satisfied. (So now) we have to concentrate on two main (Subgoals) ON (C, A) & ON (B, D)

We can solve these two goals in any order.

Two ways of getting goal state.

1. ON (C, A)  
ON (B, D)

$$\text{ON (C, A)} \wedge \text{ON (B, D)} \wedge \text{ONTABLE (A)} \wedge \text{ONTABLE (D)}$$

2. ON (B, D)  
ON (C, A)

$$\text{ON (C, A)} \wedge \text{ON (B, D)} \wedge \text{ONTABLE (A)} \wedge \text{ONTABLE (D)}$$

Consider the above where wish to proceed from the (Start to goal) state.

Start state :

$ON(B, A) \wedge ONTABLE(A) \wedge ONTABLE(C) \wedge ONTABLE(B) \wedge$   
 $ARMEMPTY$

Goal State :

$ON(C, A) \wedge ON(B, D) \wedge ONTABLE(A) \wedge ONTABLE(B)$

Conclusion :

Hence, we have implemented Goal Stack planning Algorithm.
