- **Objective of the Event:-**

Expert Talk on “Career Opportunities in Oil & Gas Industries in Structural Analysis and Design Field” was organized on Wednesday, 06th March 2024 to increase the awareness regarding career opportunities in oil & gas industries for SE, TE and BE Civil Engineering students of Jawahar Education Society’s, Institute of Technology, Management & Research, Nashik.,

- **Outcome of the Event: -**

Mr. Deepak Shelar explained that one of the earliest subfields of engineering, civil engineering focuses on the long-term planning, construction, and management of the essential public works that support modern life. Oil companies need civil engineers to construct oil fields, pipelines, bases, and shelters for a wide variety of machinery, storage facilities, and more. Civil engineers are responsible for the creation, enhancement, and defense of the environment in which we live. They are responsible for the planning, designing, and supervising the construction and maintenance of various building structures and infrastructures, such as highways, trains, airports, bridges, harbors, dams, irrigation projects, power plants, and water and sewerage systems. They are also responsible

for designing and constructing massive constructions and towering buildings that can resist any kind of climate. Within the field of Civil Engineering lies the subfield of Structural Engineering. In the oil and gas sector they observe building sites, write reports and assessments, review the work of other engineers, do calculations, and create drawings and specifications, structural engineers also study the work of other engineers.

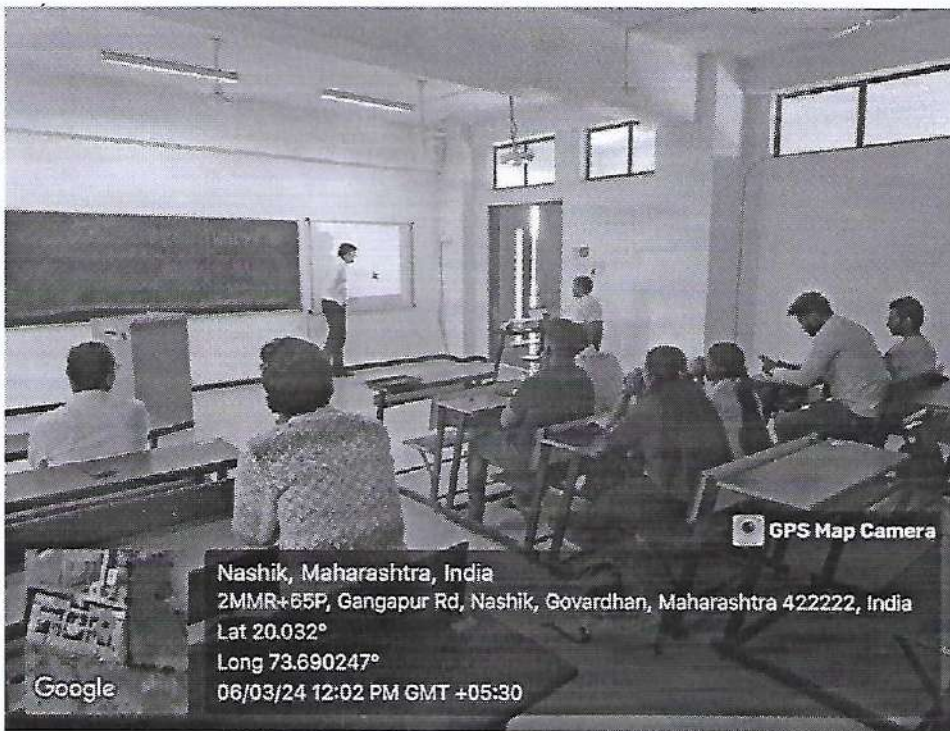

In addition, one will work with a team of experienced structural engineers and contribute to the planning of major global initiatives. Oil storage and processing facilities, as well as workshops and control rooms, are familiar places for civil engineers to be engaged in construction. The increasing demand for their expertise usually makes this the case.

Hello Sir,

Hope you doing well!

I am writing this email to bring under your notice that the shortlisted intern Prasad Deore from your college was offered with free internship at our office. Unfortunately we provided him leave for last month Insem examination since then he never showed up to office. Initially he extended leaves by saying final year picnic, then about his illness and then some pooja at family.

Sir kindly be informed that we have assigned him a critical project of HPCL Refinery which is a rare opportunity for employees as well to work but somewhere it seems as taken for granted. He merely joins daily meetings as well.

Kindly look into this matter on priority as he is been handed with confidential data and let us know what serious action needs to be taken against him.

Awaiting your kind response.

Regards,

Monali Goud

An appliance based firewall is recommended but JAWAHAR EDUCATION SOCIETY'S INSTITUTE OF TECHNOLOGY, MANAGEMENT & RESEARCH, NASHIK may also opt for software based firewalls, if the number of computers is less.

In case of a large number of users accessing the internet, a proxy server should be used to increase internet performance by caching and also putting in controls required to access the internet.

Printer: Institutions should install at least one printer per batch of 30 students. A network laser printer is most suitable for large networks.

Projector + Screen: A portable LCD projector may be required by the students to discuss and conduct presentations. It should preferably be placed in a discussion room.

Video Conference facility: College/Institute shall provide access to VC facility whenever required to students for planned VC sessions.

Maintenance & Support: An annual maintenance and upgrade contract should be signed with the software & hardware vendor to cater for maintenance requirements and upgrades.

Cyber security

As the proverb say "People are the most important thing. Business model and product will follow if you have the right people."

A one day Industrial visit was carried out at **Cyber Sanskar, Nashik on 16th April, 2024** for the **Department of Information Technology** Stream students. The main objective behind the visit was to make student aware about how various activities related to Industrial management. The topic of discussion was "**Cyber Security**" Ms. Dipti D. Survase, Assistant Professor, Department of Information Technology , took the students to the depth of Cyber Security and networking Schemes. Mr. Tanmay Dikshit Sir welcomed all the students and gave brief introduction about the company.

Cyber Security:

Cyber security is a potential activity by which information and other communication systems are protected from and/or defended against the unauthorized use or modification or exploitation or even theft.

Likewise, cyber security is a well-designed technique to protect computers, networks, different programs, personal data, etc., from unauthorized access.

All sorts of data whether it is government, corporate, or personal need high security; however, some of the data, which belongs to the government defence system, banks, defence research and development organization, etc. are highly confidential and even small amount of negligence to these data may cause great damage to the whole nation. Therefore, such data need security at a very high level.

Types of Cyber Crime:

1) Hacking

It is an illegal practice by which a hacker breaches the computer's security system of someone for personal interest.

2) Unwarranted mass-surveillance

Mass surveillance means surveillance of a substantial fraction of a group of people by the authority especially for the security purpose, but if someone does it for personal interest, it is considered as cybercrime.

3) Child pornography

It is one of the most heinous crimes that is brazenly practiced across the world. Children are sexually abused and videos are being made and uploaded on the Internet.

4) Child grooming

It is the practice of establishing an emotional connection with a child especially for the purpose of child-trafficking and child prostitution.

5) Copyright infringement

If someone infringes someone's protected copyright without permission and publishes that with his own name, is known as copyright infringement.

6) Money Laundering

Illegal possession of money by an individual or an organization is known as money laundering. It typically involves transfers of money through foreign banks and/or legitimate business. In other words, it is the practice of transforming illegitimately earned money into the legitimate financial system.

7) Cyber-Extortion

When a hacker hacks someone's email server, or computer system and demands money to reinstate the system, it is known as cyber-extortion.

8) Cyber-Terrorism

Normally, when someone hacks government's security system or intimidates government or such a big organization to advance his political or social objectives by invading the security system through computer networks, it is known as cyber-terrorism.

How to Secure Data?

For securing the data we need to pay attention to the following –

- Security Architecture
- Network Diagram
- Security Assessment Procedure
- Security Policies
- Risk Management Policy
- Backup and Restore Procedures
- Disaster Recovery Plan
- Risk Assessment Procedures

Applications:

Our Cyber security Framework consists of standards, guidelines and best practices to manage cyber security risks. The Framework is a flexible, cost-effective, voluntary program that promotes the protection and resilience of the nation's critical infrastructure.

We focus on protecting the country's infrastructure. The Industry Control System (ICS) detects security incidents; restriction of physical and logical access; and protects infrastructures from being exploited. NIST provides guidance on how to secure ICS, identify threats and recommends ways to mitigate risks.

Through our Privacy Engineering Program (PEP), we research the trustworthiness of cyber technology and the ways in which its incorporate into society. PEP applies measurement science and system engineering principles to the creation of frameworks, risk models, tools and standards that protect privacy and civil liberties

Advantages:

- 1) Protects system against viruses, worms, spyware and other unwanted programs.
- 2) Protection against data from theft.
- 3) Protects the computer from being hacked.
- 4) Minimizes computer freezing and crashes.
- 5) Gives privacy to users

Disadvantages:

- 1) Firewalls can be difficult to configure correctly.
- 2) Incorrectly configured firewalls may block users from performing certain actions on the Internet, until the firewall configured correctly.
- 3) Makes the system slower than before.
- 4) Need to keep updating the new software in order to keep security up to date.
- 5) Could be costly for average user.

Conclusion:

More attention to both the capacity and capability of the U.S. cyber security workforce is needed. Even large organizations with top talent and significant resources devoted to cyber security have suffered major cyber security compromises, and organizations that do not have such levels of talent or resources face even greater challenges. More highly skilled workers in cyber security roles would help the nation respond more robustly to the cyber security problems it faces. All organizations need to understand their threat environment and the risks they face, address their cyber security problems, and hire the most appropriate people to do that work.
